

BROCOCK | XR

HUMA-AIR
REGULATED

It's the age of the modular airgun

Launching at the start of a new decade, the all-new XR range builds on its Brocock heritage to become a very serious competitor in the compact PCP arena. Its sidelever action, combined with the latest regulator technology from Huma-Air, Walther barrel and Minelli stock, ensures the versatile XR line-up ticks every box for a 2020s', hunting, target and sporting air rifle.

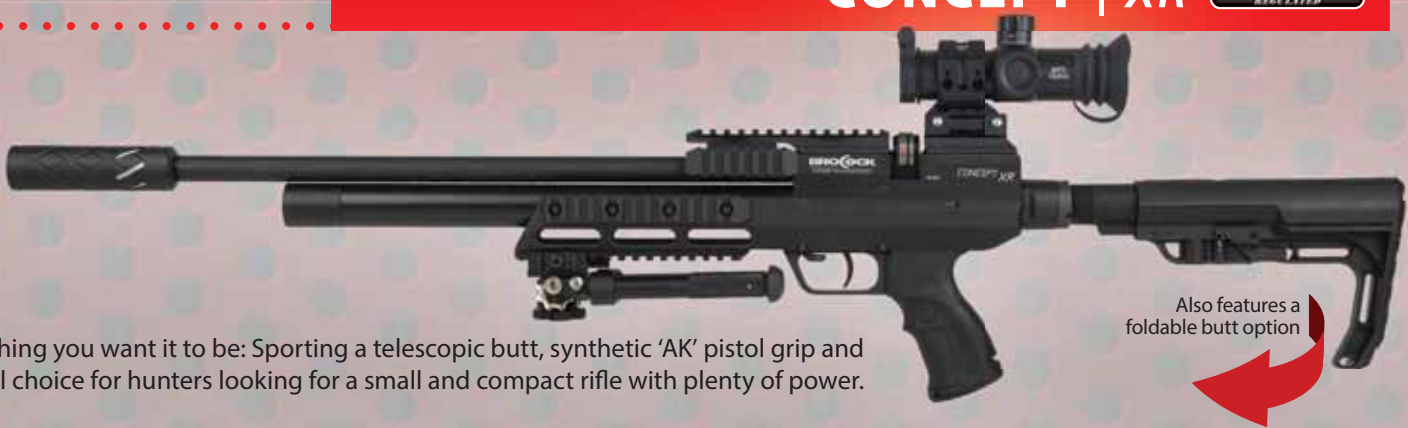

See the all-new XR range at

brocock.co.uk

A ‘modular gun platform’, the Concept XR is a rifle that can be adapted to anything you want it to be: Sporting a telescopic butt, synthetic ‘AK’ pistol grip and Picatinny-fit forend rails, the Concept XR is the ideal choice for hunters looking for a small and compact rifle with plenty of power.

Also features a foldable butt option

The XR and regulated Sniper XR: a bullpup-style air rifle that despite its short length – from just 820mm (32in) - delivers powerful performance. With balance and handling similar to a conventional rifle, the XR has a full length (432mm/17in) barrel. It's lightweight further adds to its user-friendly ergonomics courtesy of a 400cc alloy or 480cc carbon-fibre air bottle.

HIGH POWER MAGNUM VERSION AVAILABLE (with 600mm barrel)

A versatile and super-light rifle which can be adapted and/or adjusted to many configurations, making the Commander XR a perfect choice for those shooters after the ultimate gunfit or in need of a rifle for all occasions. Supplied as standard with a Picatinny-fit scope rail, ‘AK’ drop-down grip and telescopic rifle butt, available in a Black or Sand Cerakote finish.

Also features a foldable butt option

Utilising Brocock's innovative semi-bullpup concept, the original and ground-breaking Compatto has evolved into XR iteration courtesy of a number of performance-enhancing updates. Compatto XR further affirms its new status with the inclusion of a Sniper XR model option, satisfying those shooters who consider this compact PCP's credentials worthy of a fully regulated action from none other than Huma-Air.

*Scope and mounts shown are optional extras, and are available from MTC Optics/Brocock stockists. Latest and full specifications available at brocock.co.uk

The NEW Brocock **XR** Range

Sidelever carbines with a powerful performance

The new modular XR range from Brocock is the most flexible and adaptable range of precharged pneumatic (PCP) air rifles we've ever developed, with parts interchangeable across the range and compatible with many aftermarket upgrade components and accessories. The XR line-up has been co-developed with Brocock's sister companies, where the latest CNC machining processes allow us to deliver unprecedented tolerances in airgun manufacture. The result is that the XR line-up boasts the most refined and improved firing systems ever to be incorporated in a Brocock air rifle.

The XR and Sniper XR models incorporate Brocock's innovative semi-bullpup design that vastly improves gun handling and 'pointability', while the Commander XR and Concept XR versions feature an adjustable telescopic stock that allows pull-length adjustability for different shooting scenarios, shooting stances or tailored gunfit. In fact, the XR series ranks among the shortest of air rifles on the market, with the Mini XR measuring just 820mm from its adjustable butt to its silenced, shrouded muzzle.

All but the base XR model incorporate a highly-advanced regulator system, developed in partnership with Dutch regulator specialists, Huma-Air, who only Brocock and sister company, Daystate, have rights to fit as standard. When combined with the XR's latest hammer design, the technologically advanced 'reg' precisely meters air release to totally eradicate any power curve and ensure minimal shot-to-shot deviation as the rifle cycles through its usable air charge – both important factors in improving downrange accuracy. The Huma-Air regulator also returns an even higher number of shots per fill-up – a big bonus for those who opt for an XR model in high-power format.

All models in the XR series feature an on-the-fly power adjuster, removable 10-shot magazine, choked barrel with integral shrouded silencer and match-feel adjustable trigger – they can be configured with a variety of bottle, stock and power.

XR features include:

- Multiple power settings via side power adjuster
- Removable self-indexing 10 shot rotary magazine with single shot tray supplied
- Revised hammer and valve assembly
- Two-stage trigger
- Resettable safety catch
- Ambidextrous polymer or grey laminated stock
- Adjustable cheek piece and 2-D adjustable butt pad (XR)
- Collapsible, folding stock option (Commander XR/Concept XR)
- Underside Picatinny rail
- Full length, built-in fully baffled moderator with adaptor for second stage silencer
- Mini shroud available (removes internal silencer)

Specification:

Available Calibres:	.177/4.5mm, .22/5.5mm and .25/6.35mm (FAC only)
Power:	Model/territory dependent – from 12ftlb energy to 55ftlb energy (16-75J)
Overall Length:	From 820mm (32in) – model dependent
Barrel length options:	432mm (17in) or Magnum 600mm (23in)
Typical weights:	400cc – 3.1kg (6.8lbs); 500cc – 3kg (7.3lbs); 480cc carbone-fibre HiLite – 2.9kg (6.4lbs)
Dovetail width:	11.5mm with optional 20mm Picatinny (standard on Commander XR)
Valve Type:	XR – non-regulated; Sniper XR, Commander XR, Concept X and Compatto Sniper XR – Huma-Air regulated
Trigger:	Two-stage, adjustable
